4	2361025	Abhishek Singh Rawat	abhishekpersona1402@gmail.com	9411132560
Project Details				
Title: Safar Himalaya				
Technologies to be used: React.js, Node.js, Express.js, MongoDB, Razorpay				
Brief Description of the Project (Point-wise): MERN Stack Smart Tourism Platform: Safar Himalaya is a MERN stack-based smart tourism platform designed to help travellers plan, explore, and manage trips across Himalayan destinations through one integrated system. Personalized Trip Recommendation: The platform provides personalized trip recommendations based on the traveller's budget, trip duration, interests, preferred season, and group type such as solo, family, or friends using a recommendation engine. Hotel Price Tracker: Tracks accommodation prices in real time and notifies travellers of price drops, helping them book at the best possible rates. Network Dead Zone : Shows travellers the areas along their route where mobile network coverage is weak or unavailable, helping them prepare for communication and emergencies. Bluetooth-Based Communication: Lets group members exchange messages through Bluetooth mesh networking without internet access, helping maintain connectivity in remote trekking zones. SOS Button: Provides a one-tap emergency alert that shares the traveller's live location with emergency contacts and is designed to work even in low- or no-network areas of the Himalayas. Trip with Friends : Enables groups to plan trips together and automatically splits shared expenses such as hotels, cabs, and food among members. Weather-Based Alerts: Sends real-time weather and hazard warnings, including landslides and heavy rain, for the traveller's route to help avoid unsafe conditions. Safe House: Locates the nearest safe shelters or homestays during emergencies or bad weather, ensuring travellers always have a safe place to go. Three-Layer Architecture: The platform is divided into three layers—Admin, Service Provider, and Traveller—where each layer has specific roles and access to relevant features				

Whether compared with an existing system (give URL, link, or citation): https://www.myswitzerland.com/en-in/
Whether discussed with a faculty member: Yes (Mr. Rahul Singh)
Whether the proposed work extends internship work: No
Previous work with the proposed technologies: Yes
Whether a preliminary DFD or ERD has been prepared: Yes

Planning Details July 2026 to April 2027		
Phase	From	To
Literature Survey	15-07-2026	02-08-2026
Design	03-08-2026	01-09-2026
Implementation-1	02-09-2026	31-10-2026
Implementation-2	01-11-2026	01-01-2027
Implementation-3	01-01-2027	01-01-2027
Testing	04-03-2027	05-04-2027
Submission	15 April 2027	

Work Distribution Plan

Project ID: 13		Team Leader: Lokesh Singh Mehta		
Project Title: Safar Himalaya				
S. No.	Module Name	Functionalities	Technologies Used	Team Member
1	Traveller Portal	Trip Planner, Booking System, SOS Button, Payment Gateway	React.js, Node.js, Express.js, MongoDB, Razorpay	Lokesh Singh Mehta
2	Service Provider Portal	Dynamic Pricing, Smart Booking, Multiple Services	React.js, Node.js, Express.js, MongoDB	Nitesh Singh Mahara
3	Admin Portal	Verification, Admin Dashboard, Analytics	React.js, Node.js, Express.js, MongoDB	Abhishek Singh Rawat
4	Traveller Portal	Booking History, Price Graph, Nearby Services	React.js, Node.js, Express.js, MongoDB	Krishna Mehta

Remember

- Permanent PROJECT ID would be provided only after acceptance of proposal.
- If more than one person is allocated on a module, it should be mentioned who is dealing with which functionalities of the module.
- Create this distribution PLAN in detail.
- Distribution of workload should be balanced among team members.
